

ARC Informatique at SCS 2007

ARC Informatique is a company founded in 1981 that develops and markets software solutions for HMI, supervision and process optimization. These solutions are used in most industry segments such as building, airports, manufacturing industries, infrastructures and tunnels, energy production and distribution, agro-food industries, pharmaceuticals etc. ARC Informatique's solutions contribute to improving manufacturing conditions and usage of automated facilities as well as security of goods and people. They take account of the current regulations for industrial businesses both in terms of traceability for processing industries and of energy consumption requirements for the infrastructures of buildings and industrial sites.

Based close to Paris and with a presence on all continents via its subsidiaries and dealers, ARC Informatique has an international network for engaging with its customers worldwide.

ARC Informatique's policies are based on :

- integrating the latest technologies so as to prolong the benefits of customers' investment and to employ development tools that reduce development costs
- ensuring an excellent level of customer service by making available a responsive team of experts and engineers.

Naturally ARC Informatique has committed itself to a quality management policy of promoting customer satisfaction and has gained ISO 9001:2000 certification.

At the SCS 2007 exhibition, ARC Informatique will introduce a product range called **PcVue Solutions**.

The PcVue Solutions suite consists of software and hardware products for applications of visualization, control, optimization, management and analysis of data. It will be on display on ARC Informatique's stand

The core of the PcVue Solutions range is PcVue 8.10 SCADA software. The range also includes Dream Report software for creating reports and analyzing data, plus IntraVue software for maintaining the IP facilities used on Industrial Ethernet networks. These are supplemented with a range of industrial switches under the Ethernet Direct brand, having a quality/price ratio that is unprecedented in the marketplace.

Alain FAISANT, Sales manager of ARC Informatique explains: "The launch of PcVue Solutions is a logical development in the ARC Informatique Group's strategy. This strategy is centered on the brand, to which new products and functionalities will be added in future. PcVue Solutions offers a secure environment to provide its users with continuity of control and follow-up for their industrial processes." Regarding ARC Informatique's participation in SCS, he rounds off with "SCS is our big annual get-together in France which lets us present our latest innovations to our customers and to gather their thoughts in return. The holding of the SCS show in Lyons suits us well and is consistent with the concept of local service that we cultivate with our customers, having established two offices in this region in Lyons and Grenoble."
